

Field Success Story: **Blast Masters, Inc. -Elkton, MD**

July 2009

BEFORE

Project: Steel Tow Boat for Wilmington Tug

AFTER!

Blast Masters, a company based out of Elkton, MD has had recent success with use of **New Age Blast Media®** on their latest project; blasting a steel towboat for Wilmington Tug.

They admit, "We had previously exclusively used Silica Sand for our operations. We ended up trying out samples of **New Age Blast Media®** based on health concerns and in hopes of increased production and decreased dust." It took them about 30 minutes of product use to realize their needs would be met with **New Age Blast Media®**

"Around 90 tons of blast media later, we are consistently pleased with the performance of New Age Blast Media®"

Blast Masters claims, "**New Age Blast Media®** proved effective at removing several layers of anti-foul bottom paint along with epoxy primers."

Blast Masters also uses **New Age Blast Media®** on other new fabrication work including replacement of a bow and the keel section on the vessel was blasted using our medium 4070 material.

Other recent larger scale operations have included removal of excess splattered concrete from silos used for metering mortar and concrete products. Silos are blasted with **New Age Blast Media®**, primed and painted for a quick turnaround to service.

Blast Masters offers on site blasting and also production work their blast room facility. They generally blast **equipment, new fabrication, trailers, large agricultural items** along with any other abrasive blasting and painting requests they can accommodate.
