

Project: **NASA Langley Research Facility Project**

New Age Blast Media® was validated for use by general contractor Taylor Enterprise, llc. on the **NASA Langley Research Facility Project** of Hampton, Va in August of 2009.

NABM® was used to clean this 100,000 square foot facility that is comprised of one hundred and sixty-six - 2' diameters by 80' long compressed air bottles with supporting structure.

New Age Blast Media® Coarse 1040 was chosen specifically for this project for its performance, health, and environmental benefits.

Worker Safety: Does **NOT** contain the toxic heavy metals found in slags and other blasting medias.

Cleanliness: Dust is translucent, which allows for increased visibility and operator productivity.

Whiter Blast: Crushed glass delivers a natural, whiter-metal finish than many other sandblasting abrasives cannot equal.

Environmental benefits: Manufactured from 100% Recycled Container Glass **New Age Blast Media®** is chemically non toxic and inert.

When we asked the contractor Taylor Enterprises of Hampton, about the performance of **New Age Blast Media®** for this project, Charlie Taylor simply replied.

"We Love It!"
